

## 2 Step Solving A

Solve each equation.

1)  $-5m - 5 = -45$

$$m = 8$$

3)  $-3 + \frac{n}{8} = -2$

$$n = 8$$

5)  $\frac{x}{10} - 17 = -13$

$$x = 40$$

7)  $\frac{a}{6} + 10 = 11$

$$a = 6$$

9)  $\frac{-4 + x}{11} = -2$

$$x = -18$$

2)  $3 + 2r = 7$

$$r = 2$$

4)  $6x + 13 = 241$

$$x = 38$$

6)  $-10 + 4a = -34$

$$a = -6$$

8)  $8m - 4 = -28$

$$m = -3$$

10)  $\frac{-2 + b}{2} = -2$

$$b = -2$$
